## Georgia Service Center Adopting Steelman Software

*Will integrate software to*

Search:

*Steelman Software Solutions Inc., Toronto, has been contracted by Pacesetter Steel Service Center Inc., Kennesaw, GA, to integrate its process software "to streamline its business flows." Pacesetter is a distributor of coated sheet materials.*

*Pacesetter will adopt the new SEMS V 4.1 "solution," along with Intermec handheld scanners, and the latest versions of ACCPAC Enterprise Advantage Series and Oracle 10g database and application servers. Their goals are to improve sales force productivity, customer service efficiencies, and sales order accuracy; reduce manufacturing, inventory, and warehouse costs; and eliminate the need for multiple systems and databases.*

*Steelman Software Solutions are designed specifically for manufacturers and suppliers of metal products. Based on Oracle 10g infrastructure software, the Steelman suite includes modules for sales order management, product catalogue, order booking, warehouse management, manufacturing control, claims management, quality assurance, and business finance.*

*Daniel Brody, managing director for SSSI, said Pacesetter and Steelman are "a perfect match, given both of our priorities lay in customer service. ... (W)e are confident that our system will generate a sufficient return on investment from the start."*
